

Their Eye Is Their ID

Know them From their Eyes!

IrisGuard solution involves the use of the unique code in the human iris as an ID. Using IrisGuard technology, a criminal is tied to a single identity using their eyes; from that point on, the person will not be able to assume another identity to fool the system and commit their crime.

The registration process takes a few seconds and lasts a lifetime; IrisGuard provides a robust solution to identity fraud and theft once and for all.
